

“Innovating Solutions, Engineering Future”

HMT-HMX Mixer

The HMX mixer has been the benchmark in static mixing applications for more than 3 decades. It consists of a grid of inclined bars available in a variety of sizes. This construction repeatedly divides the components to be mixed into layers and spreads them over the entire cross section of the pipe.

HMT-HMV Mixer

The HMV mixer is made from corrugated plates that form open, intersecting channels in which flow is divided into many substreams. These mixers are generally used in transitional and turbulent flow regimes generally to intensify the mass transfer between immiscible liquids. These mixers are most suitable for gas mixing applications.

HMT-Helical Mixer

HMT-Non-clog Mixer
